WORK EXPERIENCE

United Mission Hospital Tansen, Orthopedics Surgeon 2017-current (United Mission Hospital Tansen – यूनाईटेड मिसन अस्पातल तानसेन)

As a general orthopedic surgeon at a busy mission hospital serving rural and underserved communities, I manage a wide range of musculoskeletal conditions with both surgical and conservative approaches. My role includes:

***Surgical Management** of fractures, dislocations, tendon injuries, and joint pathologies*

*Performing **emergency trauma surgeries**, including open and closed reductions, internal fixations, and external fixator applications*

*Conducting **elective orthopedic procedures** such as joint debridement's, tendon repairs, implant removals, and arthrotomies*

***Clinical evaluation and diagnosis** of orthopedic conditions in outpatient and inpatient settings*

Collaborating closely with physiotherapists and rehabilitation staff to ensure comprehensive patient care

Supervising junior doctors and medical students in orthopedic rotations, offering mentorship and hands-on training

*Participating in **community outreach**, providing orthopedic care in remote clinics and health camps*

Maintaining detailed surgical records and contributing to departmental audits and quality improvement initiatives

This role has strengthened my ability to work in resource-limited settings, make fast and sound clinical decisions, and deliver compassionate, high-impact care to diverse patient populations.

Residency at Tianjin First Medical Centre, department of hip, knee and shoulder reconstruction, arthroplasty and arthroscopy, 2014-2017 (天津市第一中心医院)

*During my orthopedic residency, I received focused training in both **arthroplasty and arthroscopic procedures** of the **hip, knee, and shoulder joints**, under the supervision of experienced faculty and specialists. My responsibilities and learning outcomes included:*

*Assisting **primary and revision total joint arthroplasties**, including:*

Total Hip Arthroplasty (THA)

Total Knee Arthroplasty (TKA)

Shoulder Arthroplasty (including hemi and total replacements)

*Gaining experience in **diagnostic and therapeutic arthroscopy**, including:*

Knee: meniscectomy, meniscal repair, ACL and PCL reconstruction

Shoulder: rotator cuff repair, labral repair, subacromial decompression

Pre-operative planning using imaging (X-ray, MRI, CT) and templating techniques

Post-operative care and rehabilitation protocols for arthroplasty and arthroscopy patients

Participating in academic sessions, surgical audits, case discussions, and journal clubs focused on advances in joint preservation and replacement

Managing surgical complications, implant selection, and infection control strategies

*This training developed my skills in **minimally invasive techniques**, enhanced my understanding of **biomechanics and implant design**, and strengthened my ability to make surgical decisions tailored to individual patient anatomy and pathology.*
