STATEMENT OF PURPOSE

It is with great hope and expectation that I am writing this letter, to gain the opportunity to work under this fellowship program. As an aspiring and passionate orthopaedic surgeon, I find the skills and experience provided by this course, a necessity to move forward towards my own self-set goals and ambition in clinical practice.

As a junior resident, having trained at high volume centre, I have experience in handling orthopaedic trauma cases from amputations, damage control orthopaedics, internal fixation of fractures, soft tissue procedures, joint replacements, ligament reconstructions, casting for CTEV's. Working at Apollo Hospitals Orthopaedic Department, with Sports Medicine team, has improved me at building interpersonal relationship, attending conferences, advancements in managing various trauma cases, hands on in doing various arthroscopic procedures. I got to attend cadaveric workshops for trauma and arthroscopy at ESI medical college, Hyderabad and cadaveric work shop on meniscus repair at M.S. Ramaiah institute of medical sciences, Bangalore. I am good at communicating medical issues with patient and attenders. Having collaborated with one of my mentors I got the opportunity to work on projects and publish our work at indexed Scopus journal.

With strong work ethic, a genuine eagerness to learn, and a professional team-focused attitude, I am strongly motivated to possess skill and operative experience in advanced surgeries. I am committed in delivering high-quality patient care, contributing to academics and clinical, research projects, and approaching every learning opportunity with humility, curiosity, and professionalism. I have been actively searching for the right course to follow and the right program to attend in this regard for some time. The course you are conducting seems to be a perfect one to pursue, to fulfil my goal. I intend to participate in this program with both short term goals as well as a long-term vision.

Working with skilled orthopaedic surgeon will expose me to the precision, technical challenges and dynamic problem-solving approach required in this field. I find the environment both stimulating and deeply rewarding. I want to refine my proficiency in approaching complex trauma cases and complex procedures for joint stifness around elbow, knee joints. I'm looking for a program that allows me to grow not only as an operator but also as a clinician, communicator, and future leader.

I assure you that, the learning imparted on me through this program would end up serving a lot of common people in a developing nation. I am hereby giving two references who know me very well from the beginning of my career.

Hopefully,

Dr. Gangadasari Yamini.

MBBS, MS Orthopaedics.
